Glyph's GT 062 is a two drive tabletop designed for professional audio and video applications, and can be configured in four drive modes -- RAID 0, RAID 1, JBOD, and Spanning. RAID 1 (mirroring) offers data redundancy and real-time backup by writing the same data to the two internal hard drives at the same time. Should a drive failure happen, data is still available on the remaining drive. The GT 062 ships with Glyph Manager, a software utility for Mac OS X and Windows that configures the GT 062 in one of the four drive modes, and displays health status of the GT 062 drives.
