

Visual-Pager®

Series 900 and MultiPage • Wired and Wireless

What does a Visual-Pager do?

The Visual-Pager is a low-cost solution to your on-premise paging needs. It silently and discreetly pages people in a group setting. You simply enter the person(s) assigned number into the provided keypad, and the number immediately appears on the display(s). The person being paged then reports to the appropriate room or location. With no batteries to replace or additional parts to buy, the Visual-Pager is virtually maintenance free, plus it's easy to install.

The Visual-Pager is available in both a wired (900 Series) or wireless (MultiPage) version. The 900 Series Visual-Pager has the capability of rotating up to 30 numbers on the display(s) at a time while the Wireless MultiPage can rotate up to 20 numbers.

Visual-Pager Options

The **Wired 900 Series** and the **Wireless MultiPage** both offer displays in 2-, 3-, or 4-digit versions with 5.5" tall characters for visibility up to 125 feet. Multiple displays can be purchased to enhance viewing in a single-room setting, or to place in various locations. All displays come in attractive black aluminum cases with dark red Plexiglas front panels.

900 Series Wired Visual-Pager

Wired 900 Series Visual-Pager

The 900 Series Wired Visual-Pager Keypad is about the size of a hand-held calculator and is wired to a display. The keypad's LCD screen shows the same numbers that are displayed on the Visual-Pagers. Up to 32 keypads can be used with each display, allowing keypads to be placed in various locations. You may enter or delete numbers from any keypad, and these changes display immediately on the Visual-Pager. The Visual-Pager has the capability of rotating up to 30 numbers on the display(s) at a time. The displays can be wired up to 2,000 feet away from the keypad.

MultiPage Wireless Visual-Pager

Wireless MultiPage Visual-Pager

The Wireless Visual-Pager is ideal for applications where mobility is important or hardwiring is not an option. This wireless system requires AC power both at the transmitter and the display.

The MultiPage is a high-powered, portable system suitable for all paging applications. This system will work in multiple buildings, all-metal buildings, outside of buildings, and multi-level buildings.

This 460 MHz system performs well in open-field testing (up to 2 miles in optimum conditions). In actual use, the maximum range is estimated between ¼ and ½ mile.

The MultiPage can operate with the Wireless Visual-Pager, Vibrating Pagers, and the Traffic Signal Light (the Informant) pictured below.

SIX-DIGIT VISUAL-PAGER®

Enhanced paging capabilities are available with the Microframe 906 Series Visual-Pager. Similar to the original 2-, 3-, and 4-digit systems, the 6-Digit Visual-Pager enables the user to silently and discreetly page people in a group setting. The 906 Series has many of the same benefits and features of the original Visual-Pager (featured on the back), only in a 6-digit version. Because of some slight engineering differences, the 906 Series requires a different keypad to drive the system, and is only capable of rotating 26 numbers at a time rather than 30.

906 Series Visual-Pager

Timer System Model 6200 Series

Timer Applications

- Time Motivational Speakers
- Time Radio and TV Broadcasts
- Time Messages for Taping
- Time Courtroom Testimonies
- Time School or Church Speakers
- Time Stage Performances
- Display Time of Day

Timer Capabilities

Microframe's Model 6200 Timer can be set to count up or down. It features an LCD display which allows the local display to view hours, minutes, and seconds. With two full-feature timers in one package, you can view the mode of both timers simultaneously. The Timer can be programmed to automatically reset and reload or reset and start over. For instance, give the speaker a "two-minutes-till-start" countdown by programming Timer "B" to start when Timer "A" stops. The Remote Display has large 5.5" tall numbers visible up to 125 feet away.

Model 6200 Timer Keypad

The keypad display shows both "A" and "B" timers simultaneously and allows the user to select which timer will appear on the remote display. Changes entered on one timer do not affect the contents and/or mode of the other timer. Either timer can count up or down and start or stop independently. Timer "A" can start Timer "B" or show the time of day.

Timer Display Options

The Microframe Timer System offers three different display options. The first option is the **940 Display**. It is a 4-digit large remote display which automatically shows minutes and seconds for display times less than one hour, and hours and minutes for display times over one hour. The digits on this display are 5.5" tall for viewing up to 125 feet.

The second option is the **960 Display**, which is a 6-digit large remote display that shows hours, minutes, and seconds simultaneously. The digits on this display are also 5.5" tall for viewing up to 125 feet.

The third option is the **9620 Display**. This display features 2.5" tall numbers visible up to 80 feet, and shows hours, minutes and seconds on both Timer "A" and Timer "B" simultaneously. The top digits can display the time-of-day, while the lower digits display the count up/down timer.
